

Waste Handling Solutions Ltd

"Providing total waste handling and recycling solutions"

5010E General Description

Model No. 5010E Baling Press

This refurbished baler is a single-phase unit and which can be plugged into any **13-amp** socket.

The top-loading unit is simple to operate; once the repeated loading/compaction cycles have been completed and the chamber is full, the operative is required to tie off the bale within the chamber.

The bale measures **500mm x 700mm x 700mm** and will weigh in the region of **40-60kgs**; once tied, the bale is removed from the chamber via the hinged front access door with the **bale trolley** supplied. The machine is then ready to repeat the process.

WHS Ltd Refurbished Units: We completely strip the unit prior to it being shot blasted back to bare metal. The unit is then primed and repainted. The compactor is then reassembled; all electrical components are tested and replaced as necessary, as are the hydraulic hoses, pump, motor and ram. The unit is then test run, thus we are assured of the quality of each refurbished machine.
